Senior iOS engineer with **8+ years building iPhone apps since 2018** across banking, automotive, gaming and health. I ship fast, secure, beautifully crafted native apps in Swift and care about the details users feel: a sign-in that is **3x faster**, an app that **opens in under a second**, passkeys used by **90% of 500K customers**, animations and layouts that follow Apple's Human Interface Guidelines. I have built passkey authentication for a bank, EV charging for FordPass, and an end-to-end encrypted patient app on the App Store, and I bring AI into apps with Core ML, Speech and LLM APIs. I own features end to end, from architecture and product decisions to App Store release.

WHAT I BRING

Product and UI/UX craft

Strong design taste; pixel-level polish, fluid animation and interaction, native patterns from Apple's Human Interface Guidelines.

Security and identity

Passkeys (WebAuthn / FIDO2), Face ID, Keychain, Okta iOS SDK, OAuth 2.0 with DPoP, secure session management, end-to-end encryption, work inside a bank's fraud and identity team.

AI in apps

On-device Core ML, Speech and NaturalLanguage, plus LLM and voice APIs (OpenAI Realtime, Gemini, ElevenLabs) shipped to real users.

Performance

Profiling with Xcode Instruments (Time Profiler, Network) to find and fix real bottlenecks: sign-in 15 s → 5 s, launch 6 s → under 1 s.

Architecture at scale

Clean Architecture, MVVM, modular Swift packages and reactive data flow that keep large apps testable as teams grow.

Ownership

Founder and iOS lead: from idea, design and architecture to TestFlight, App Store release and support in production.

SKILLS

Languages & UI: Swift, Objective-C, SwiftUI, UIKit, Combine, Swift Concurrency (async/await, actors), RxSwift

Identity & security: AuthenticationServices, passkeys (WebAuthn / FIDO2), Associated Domains, LocalAuthentication (Face ID), Keychain Services, Okta iOS SDK, OAuth 2.0, DPoP, session management, end-to-end encryption

Apple frameworks: Core Data, Core ML, NaturalLanguage, Speech, AVFoundation, Swift Charts, MapKit, Core Location, Core Motion, PhotosUI, PDFKit, UserNotifications, BackgroundTasks, WebKit

Architecture: MVVM, Clean Architecture, modular Swift packages · Xcode Instruments (Time Profiler, Network), XCTest, Swift Testing, UI tests, TestFlight, App Store Connect, CI

Services & AI: Firebase (Auth, Firestore, Messaging), Stream Chat, Virgil E3Kit, Alamofire; OpenAI Realtime API, Gemini, ElevenLabs

EXPERIENCE

EQ Bank · Equitable Bank

Apr 2025 – Present · Toronto

Software Engineer, iOS · Security, Fraud & Customer Identity (CIAM)

- Made sign-in **3x faster, from 15 seconds to 5 seconds**, and cut **app launch time from 6 seconds to under 1 second**: profiled with **Xcode Instruments** (Time Profiler and Network), timed every call on the critical path, found the bottlenecks and fixed them.
- Built **passkey sign-in for the EQ Bank iOS app** with AuthenticationServices, Associated Domains and Face ID; **adopted by 90% of 500K customers**, replacing passwords with phishing-resistant, device-bound credentials.
- On the convergence team building the **unified iOS app for the EQ Bank and PC Financial merger**, bringing passkeys and the new sign-in to **4.5M customers** while keeping today's app working for existing ones.
- Part of the identity migration from **HID to Okta**: integrated the **Okta iOS SDK** (OAuth 2.0), built **session management** with token storage and refresh in the **Keychain**, and **DPoP** (sender-constrained tokens) so a stolen token can't be replayed from another device.

LEYOXA · Smile Link

May 2023 – Present · Texas

Founder & iOS Lead · Smile Link patient app, live on the App Store

- Designed and built **Smile Link**, a patient app for dental practices: **end-to-end encrypted messaging** with the clinic, appointment booking and reminders, running on live Open Dental practice data.
- **Architecture:** UIKit with RxSwift and MVVM, organised with Clean Architecture into separate Domain and Platform Swift packages so business logic is independent of the UI and fully testable.
- **Security and privacy:** end-to-end encryption with Virgil E3Kit on top of Stream Chat, secrets in the Keychain, Face ID app lock (LocalAuthentication), built for healthcare privacy (HIPAA).
- **Data and networking:** Core Data offline cache, Alamofire networking, Firebase Cloud Messaging push, BackgroundTasks refresh; Lottie animations and custom UI for a calm, friendly experience.
- Owned the full lifecycle: product, UI/UX, architecture, TestFlight betas and App Store releases.

Stack: Swift, UIKit, RxSwift, MVVM, Clean Architecture, Swift Package Manager, Core Data, Alamofire, Stream Chat, Virgil E3Kit, Firebase, Keychain, LocalAuthentication, BackgroundTasks, Lottie

LEYOXA · Praxis AI

Client: DDS Marketing · Florida

AI products for dental practices

- Launched an **AI voice receptionist** (OpenAI Realtime API + ElevenLabs, integrated with the NexHealth practice system) that answers and books patient calls; grew to **39 active clinics handling 100+ calls a day**, driving significant revenue growth.
- Built AI agents that write and publish SEO content for each clinic every month.

Avanade · Client: Ford

Sep 2021 – May 2023 · Toronto

Full-stack Developer · FordPass iOS

- Built **intelligent and manual EV charging scheduling in the FordPass iOS app** in Swift, shifting charging to off-peak hours to **lower charging costs** for Ford EV owners; the feature reached wide adoption across FordPass users.
- Automated Azure infrastructure with Terraform and ARM templates, **cutting a client's cloud costs by \$1M a year**.

SeedCI

Jan 2021 – Sep 2021 · Kitchener

Co-founder, AI Engineer · YC candidate

- Built unsupervised learning that **detects cyber-attack campaigns** on ezSec's EVA platform; shipped a 97%-accurate price model behind a Flask API with Splunk drift monitoring.

EARLIER IOS WORK

Fleet Complete · Mobile Developer Intern · iOS in Swift and Objective-C; Java backend

Jan – Apr 2020

Stars Technologies · PokerStars · Mobile Developer Intern · iOS and Android on PokerStars

Sep 2018 – Aug 2019

Aterica Digital Health · Mobile Engineer Intern · iOS and Android apps for medical devices

Jan – Apr 2018

SELECTED PROJECTS

- **JournalBuddy** · AI voice journal in SwiftUI: Speech transcription, NaturalLanguage, Core ML and Gemini analysis, Swift Charts, Swift Concurrency, Face ID; XCTest and Swift Testing.
- **SZN** · hockey player-card app in SwiftUI: Firebase Auth, Firestore and Storage, MapKit, Core Location, Core Motion, PhotosUI.

EDUCATION & MORE

University of Waterloo · BAsC Computer Engineering (Co-op), 2016 – 2021 · University and PEng scholarships

Microsoft Certified: Azure Solutions Architect Expert, Azure Developer Associate · **1st place**, Javan Music Festival
